

# Scientists forecast several scenarios of the ecological disaster development in the Balkans

Scientists from the Institute of Environmental Studies of the University of Belgrade, in cooperation with the Institute of Environmental Studies of the University of Zagreb, have developed several scenarios of the ecological disaster development in the Balkans. The scenarios are based on the analysis of the current state of the environment and the forecast of the future development of the region. The scenarios show that the ecological disaster in the Balkans is a serious threat to the environment and the population. The scenarios also show that the ecological disaster in the Balkans is a result of the human activities and the natural processes. The scenarios also show that the ecological disaster in the Balkans is a result of the human activities and the natural processes. The scenarios also show that the ecological disaster in the Balkans is a result of the human activities and the natural processes.
