

Rivers of Siberia: Proceedings of the International Conference, Tomsk, 2010

Background: The River of Siberia project is a multi-year project funded by the European Union and the Russian Federation, aimed at improving water management in the region. The project involves a series of workshops and conferences, including the International Conference on the River of Siberia, which was held in Tomsk, Russia, in 2010. The conference was organized by the Network of EECCA Water Management Organisations (NEMO) and the Russian Ministry of Natural Resources and Environmental Protection. The conference focused on the challenges of water management in the region, including the impact of climate change, land use changes, and the need for improved water governance. The conference was attended by experts from various countries, including Russia, the European Union, and other regions all over the world. The conference was a success, and it provided a valuable opportunity for experts to share their knowledge and experiences. The conference also resulted in a series of recommendations and a plan of action, which will be used to guide the project's activities in the future.
