

Muskhine FA, Muskhine OM, Husk Region Water Resources Evaluation

The Network of EECCA Water Management Organisations

Abstract: This report presents the results of a water resources evaluation conducted in the Husk region of the Kyrgyz Republic. The evaluation was carried out by the Muskhine FA and Muskhine OM, who are members of the Network of EECCA Water Management Organisations. The report provides a detailed analysis of the water resources in the region, including the assessment of the water quality and quantity, the identification of the main water users, and the evaluation of the water management practices. The results of the evaluation show that the water resources in the region are generally good, but there are some areas where the water quality is poor and the water quantity is low. The report also identifies the main water users in the region and evaluates the water management practices. The results of the evaluation show that the water management practices are generally good, but there are some areas where the water management practices are poor. The report concludes that the water resources in the region are generally good, but there are some areas where the water quality is poor and the water quantity is low. The report also identifies the main water users in the region and evaluates the water management practices. The results of the evaluation show that the water management practices are generally good, but there are some areas where the water management practices are poor.
